

VANTRAN RECENT PROJECTS

CertainTeed Corporation Retrofit

CertainTeed Corp, a manufacturer of building materials, was in dire need of a 1500 kVA substation transformer to replace its existing unit which was on its last leg. This transformer was a complex retrofit with cover-mounted bushings and air terminal chambers connecting to high voltage switchgear and low voltage bus duct. In addition to the transformer's complexity, the project also required an expedited delivery of seven weeks from order receipt to on-site delivery.

Minimizing production down time is critical in today's high-volume production processes. Inability to deliver on time for the outage window can cost customers tens of thousands of dollars a day or even per hour of lost production time. Besides the costs of lost production, late deliveries cause the added expense of extending crane time and labor to accommodate the delays.

As promised, VanTran delivered a complex retrofit substation transformer in seven weeks to meet our customer's timeline.

VANTRAN VALUE PROPOSITION

VanTran engineered solutions provide for custom retrofits lowering cost of installation.

VanTran has the shortest lead times in the industry for custom retrofit designs.

VanTran plug and play installations reduce customer outage time resulting in increased revenue and earnings for customers.
