

Vantran
TRANSFORMERS

*Family-owned and
Manufactured in
Waco, Texas*

MULTITAP SUBSTATIONS

VanTran offers multi-voltage step up options for temporary power requirements. The VanTran multi-tap substation transformer is the gold standard in the world, giving the ability of single voltage generators to provide load voltages at many different ratings.

Whether you need a transformer for a large event or a critical electrical power infrastructure, VanTran has you covered. Our robust design will ensure lifelong operation under the harshest environments. Our multi-tap includes standard features like forklift pockets and chain tie-downs which allow for ease of mobility without the need for a crane, and ease of tying down to truck beds.

9D00T&EÖHGPR0WWDSDV0IBHVDH0HD0WK0GEWKWRSH0DOS&DQ0RG bank dealers, as well as electrical utilities and large-scale events. VanTran multi-tap units are available in sizes up to 7000 kVA and 35 kV system voltage for both step-up and step-down applications.

If you have a need for such a solution, you should talk to the company that invented the multi-tap substation transformer - VanTran Transformers.
